The BSides Idaho Falls Crew is soliciting presentations for our 2nd annual conference to be held at the College of Eastern Idaho, Idaho Falls, Idaho on September 20-21, 2019. Download as PDF at https://www.bsidesif.org/speakers/CFP-2019.pdf

Develop a new technique or something fun in your home lab? Want to share your insights, mistakes, and lessons learned with the community at large? Get the conversation started by submitting to our CFP!

Important Dates

Important dates can be found on our dates page at https://www.bsidesif.org/, which will always have the most current information.

CFP will close July 7, 2019

CFP submitters will be notified July 21, 2019

About BSides Idaho Falls

In 2018, several security professionals gathered together and decided that the computer security community in Idaho Falls could benefit from a community centered conference in the style of the BSides conferences. Last year's event was a great success with more than 150 attendees for the single day conference, and we are hoping to grow even larger this year!

BSides Idaho Falls is presented by the community, for the community and our focus is providing our attendees with the latest tips, techniques, research, and wisdom from the computer security world as a whole. Our goal is to support the computer security community by providing a place to make connections and learn from each other.

Suggested topic areas

BSIdes Idaho Falls submissions should focus on topics that are of interest to the security and hacking communities. The list below is meant as a guideline, not an exhaustive list.

- Hacking of Software/Hardware
- Incident Response
- Operational Security
- Computing Hardware Security, Repurposing, Designing/Building
- Technology Policy and Politics (yep, we're willing to go there)
- Security Education

- Security and Hacking Capture-the-Flag Topics
- Security Automation
- Digital Forensics
- Bug Bounties
- Secure Development Practices / DevSecOps / SecDevOps
- Security Aspects of Cloud Computing
- Practical Security
- Machine Learning (securing, and using for security)
- War Stories, Histories, Scientific Advancement, Trade, etc. of Kernels
- Security Metrics (Inform Risk Analysis, Identify Priorities, Measure Progress, etc)
- Risk Management
- BeyondCorp / Zerotrust models in practice
- Privacy and Anonymity
- Identity & Access Management
- Focused Security Research (Visualization, IoT, Vehicles, Toys, Web apps, etc)

Even if your talk doesn't fit perfectly into one of these categories but seems like it fits within the idea of the conference, please submit for consideration! This list is simply suggestive of the kinds of things we're looking for… feel free to expand our horizons!

Conference format

BSides Idaho Falls has two, concurrent main tracks, and talks should fit into a 60 or 20 minute timeslot (meaning a 15 or 50 minute presentation is expected). Presenters will be positioned in front of the crowd and will present using normal audio/visual equipment.
